5-Amino-1MQ 10mg

QUICK GUIDE

NNMT inhibitor, mouse data only ♥

WHAT IS 5-AMINO-1MQ?

5-Amino-1MQ is a small molecule, not a peptide, that blocks the enzyme NNMT in fat tissue. In mice, blocking NNMT raised energy expenditure and reduced fat. There are no published human studies.

Strongest evidence: D · Animal / lab

RECONSTITUTION

Add 2 mL bacteriostatic water to the 10 mg vial.

This yields 5 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 2 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog 1 mg/day ×4 wk → 2 mg/day ×4 wk (grade E)

WEEK	DOSE (Daily during a cycle)	UNITS (U-100 SYRINGE)
Weeks 1–4	1 mg	20 units
Weeks 5–8	2 mg	40 units

Cycle: catalog: 4–8 weeks on, 2–4 weeks off (28–56 / 14–28 days).

POTENTIAL BENEFITS

- **Target:** NNMT knockdown protected mice from diet-induced obesity. D · Animal / lab
- **Mouse fat loss:** Weight loss in obese mice in 11 days (patent data). D · Animal / lab
- **Human data:** None published. N/E · Not enough evidence

POTENTIAL SIDE EFFECTS

- No human data
- Catalog mentions GI effects (eat a light meal)

The aggressive ladder overlaps: 'Week 2–3: 2 mg' and 'Weeks 3–4: 3 mg' both claim week 3.

At 5 mg/day a 10 mg vial lasts 2 days.

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade D: Animal / lab

For educational use only.
