AOD-9604 5mg

QUICK GUIDE

GH fragment with a negative weight-loss trial ♥

WHAT IS AOD-9604?

AOD-9604 is a 16-amino-acid fragment of human growth hormone. It was designed to keep a claimed fat-burning effect without GH's growth or blood-sugar effects. It proved safe in human trials, but its 24-week phase 2b found no weight loss beyond placebo.

Strongest evidence: B · Human trials

RECONSTITUTION

Add 2.5 mL bacteriostatic water to the 5 mg vial.

This yields 2 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 2.5 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog fat-loss: 250 mcg × 2/day, 90 on / 30 off (grade E)

WEEK	DOSE (Once or twice daily)	UNITS (U-100 SYRINGE)
Weeks 1–3	250 mcg	12.5 units

Set the cycle to 90 / 30 days. Phase 2b showed no weight-loss benefit.

Cycle: catalog: 20 on / 10 off (standard) or 90 on / 30 off (fat loss), in days.

POTENTIAL BENEFITS

- **Safety:** No IGF-1 or glucose-tolerance effects across 6 RCTs. B · Human trials
- **Efficacy:** Phase 2b (n=536): no significant weight loss vs placebo. B · Human trials
- **Status:** Not approved; TGA rejected the obesity indication. B · Human trials

POTENTIAL SIDE EFFECTS

- Well tolerated in trials
- Injection-site reactions
- No IGF-1 or glucose effects seen

Vial size isn't stated. 300 mcg = 15 units in 2.5 mL implies a 5 mg vial (2 mg/mL), and both protocols match that.

250 mcg = 12.5 units exactly; the catalog prints 13 (rounding).

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 30 days.

Evidence grade B: Human trials
