Vitamin B12 10mg

QUICK GUIDE

Essential vitamin: treats deficiency, not tiredness ♥

WHAT IS VITAMIN B12?

Vitamin B12 is needed to make red blood cells and maintain nerves. Injections are FDA-approved to treat deficiency, including pernicious anemia, at 100 mcg a month. The catalog's 5,000 mcg doses are 50 times that, and most of an excess dose is passed in urine.

Strongest evidence: A · Approved use

PREPARATION

Pre-made solution: no mixing.

1. Swab the vial top with an alcohol pad.
2. Draw the dose straight from the vial.
3. Refrigerate; follow the vial label.

DOSING PROTOCOL

Catalog: 5,000 mcg weekly × 4 wk (grade E)

WEEK	DOSE (Weekly, then monthly)	UNITS (U-100 SYRINGE)
Weeks 1–4	5 mg	50 units

Then add a monthly maintenance protocol.

POTENTIAL BENEFITS

- ♥ **Approved:** Cyanocobalamin injection for B12 deficiency. A · Approved use
- ♥ **Excretion:** 50–98% of a 1,000 mcg dose ends up in urine. A · Approved use
- ♥ **Energy claim:** No evidence of benefit without deficiency. N/E · Not enough evidence

POTENTIAL SIDE EFFECTS

- Injection-site pain
- Rare hypersensitivity (cobalt)

Vial size isn't stated; 10 mg/mL is implied by the catalog's own unit math.

The catalog says not to use supplemental B12 with chronic kidney problems. That isn't a label contraindication (the label lists cobalt sensitivity).

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade A: Approved use

For educational use only.
