Cardiogen 20mg

QUICK GUIDE

Khavinson bioregulator for heart and vascular tissue ♥

WHAT IS CARDIOGEN?

Cardiogen is one of the short 'bioregulator' peptides from Vladimir Khavinson's group in Russia, claimed to normalize heart and vascular tissue. The research comes almost entirely from that one group, and no independent human trial of Cardiogen was found.

Strongest evidence: D · Animal / lab

RECONSTITUTION

Add 2 mL bacteriostatic water to the 20 mg vial.

This yields 10 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 2 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog course: 2 mg (grade E)

WEEK	DOSE (Daily short courses, a few times a year)	UNITS (U-100 SYRINGE)
Weeks 1–3	2 mg	20 units

Cycle: Catalog course length / yearly repeats; 20 days on is the default.

POTENTIAL BENEFITS

- **Concept:** Short peptides claimed to normalize tissue gene expression. D · Animal / lab
- **Human data:** No independent trials found. N/E · Not enough evidence

POTENTIAL SIDE EFFECTS

- No controlled human data
- Injection-site reactions

The catalog gives two different yearly frequencies (2–3 vs 3–4 cycles).

Treating developer claims as established

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade D: Animal / lab

For educational use only.
