DSIP 5mg
QUICK GUIDE

Sleep peptide from the 1970s, still a riddle ♥

WHAT IS DSIP?

DSIP was discovered in the 1970s and named for promoting deep sleep. Small 1980s trials gave mixed results, no receptor has ever been found, and probably fewer than 200 people have taken part in all the published studies.

Strongest evidence: C · Human observational

RECONSTITUTION

Add 2.5 mL bacteriostatic water to the 5 mg vial.

This yields 2 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 2.5 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog: 100 → 200 mcg at bedtime (grade E)

WEEK	DOSE (Nightly)	UNITS (U-100 SYRINGE)
Week 1	100 mcg	5 units
Weeks 2–12	200 mcg	10 units

Cycle: catalog: 8–12 weeks on, 4–8 weeks off.

POTENTIAL BENEFITS

- **Sleep:** Some small trials: better sleep efficiency. C · Human observational
- **Inconsistent:** Other studies: weak or no effect. C · Human observational
- **Mechanism:** No receptor identified. C · Human observational

POTENTIAL SIDE EFFECTS

- Few reported in small old studies

Unit math: every unit value the catalog prints matches (2 mg/mL).

Combining with sedatives (inferred)

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade C: Human observational

For educational use only.
