FOXO4-DRI 10mg

QUICK GUIDE

Senolytic peptide, mouse data only ♥

WHAT IS FOXO4-DRI?

FOXO4-DRI is a modified peptide that frees p53 inside senescent ('zombie') cells so they self-destruct. In aged mice it restored fitness, fur and kidney function. It has never been tested in people.

Strongest evidence: D · Animal / lab

RECONSTITUTION

Add 3 mL bacteriostatic water to the 10 mg vial.

This yields 3.3 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 3 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog 16-week ladder (grade E)

WEEK	DOSE (Daily)	UNITS (U-100 SYRINGE)
Weeks 1–4	250 mcg	7.5 units
Weeks 5–8	375 mcg	11.2 units
Weeks 9–16	500 mcg	15 units

Cycle: catalog: 8–16 weeks on, 4–8 weeks off.

POTENTIAL BENEFITS

- **Senolysis:** Selectively kills senescent cells in culture. D · Animal / lab
- **Aged mice:** Restored fitness, fur and kidney function. D · Animal / lab
- **Humans:** No trials. N/E · Not enough evidence

POTENTIAL SIDE EFFECTS

- No human data

Vial size isn't stated; 10 mg is implied by the unit math.

250 mcg = 7.5 units exactly; the catalog prints 8 (rounding). Other values match.

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade D: Animal / lab

For educational use only.
