GHK-Cu 100mg

QUICK GUIDE

Copper peptide: a skincare staple, untested as an injection

WHAT IS GHK-CU?

GHK-Cu is a natural three-amino-acid peptide bound to copper. It's a widely used cosmetic ingredient, with reports of firmer, less-wrinkled skin when applied topically. Injecting it is common in peptide circles, but no human study has looked at that.

Strongest evidence: C · Human observational

RECONSTITUTION

Add 5 mL bacteriostatic water to the 100 mg vial.

This yields 20 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 5 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog: 1 mg → 2 mg daily (grade E)

WEEK	DOSE (Daily)	UNITS (U-100 SYRINGE)
Weeks 1–2	1 mg	5 units
Weeks 3–8	2 mg	10 units

Cycle: catalog: 4–12 weeks on, 4–12 weeks off.

POTENTIAL BENEFITS

- **Topical:** Reviews report fewer wrinkles and more collagen; strong cosmetic safety record. C · Human observational
- **Wound healing:** Animal repair in multiple tissues. D · Animal / lab
- **Injection:** No human data; stinging common. E · Community / vendor

POTENTIAL SIDE EFFECTS

- Injection stinging / site reactions
- Topical: well tolerated (cosmetics)

Copper metabolism disorders, e.g. Wilson's disease (inferred)

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade C: Human observational
