GHRP-6 10mg

QUICK GUIDE

The original GHRP: GH release plus hunger ♥

WHAT IS GHRP-6?

GHRP-6 is the first-generation peptide that activates the ghrelin receptor. It releases growth hormone and strongly increases appetite. It's the parent compound of GHRP-2 and has never been approved for any use.

Strongest evidence: C · Human observational

RECONSTITUTION

Add 3 mL bacteriostatic water to the 10 mg vial.

This yields 3.3 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 3 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog: 100 mcg twice daily (grade E)

WEEK	DOSE (1–3 times daily)	UNITS (U-100 SYRINGE)
Weeks 1–12	100 mcg	3 units

Cycle: catalog: 6–12 weeks on, 2–4 weeks off.

POTENTIAL BENEFITS

- **GH release:** Ghrelin-receptor agonist. C · Human observational
- **Appetite:** Strongest hunger effect of the class. C · Human observational
- **Evidence:** Human PK only; no outcome trials. C · Human observational

POTENTIAL SIDE EFFECTS

- Marked hunger
- Water retention
- Possible cortisol / prolactin rise

Unit math: every unit value the catalog prints matches (3.33 mg/mL).

Fat-loss goals (appetite)

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade C: Human observational
