Glutathione 1500mg

QUICK GUIDE

The body's master antioxidant ♥

WHAT IS GLUTATHIONE?

Glutathione is a three-amino-acid antioxidant every cell makes for itself. IV glutathione was safe in a small Parkinson's trial, but its benefit wasn't significant. No study has looked at small under-the-skin doses.

Strongest evidence: B · Human trials

RECONSTITUTION

Add 7 mL bacteriostatic water to the 1500 mg vial.

This yields 214.3 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 7 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog: 100 mg Mon–Sat × 4 wk (grade E)

WEEK	DOSE (6 days a week)	UNITS (U-100 SYRINGE)
Weeks 1–4	100 mg	46.7 units

Cycle: catalog: 4 weeks on, 4 weeks off.

POTENTIAL BENEFITS

- **Antioxidant:** The main intracellular redox buffer. B · Human trials
- **Parkinson's (IV):** +2.8 UPDRS vs placebo, not significant. B · Human trials
- **SC use:** No human studies. N/E · Not enough evidence

POTENTIAL SIDE EFFECTS

- Well tolerated IV in the Parkinson's pilot
- Injection-site irritation
- Rare hypersensitivity

100 mg = 46.7 units exactly (214 mg/mL); the catalog prints 46 (rounding).

Expecting a proven effect from SC doses

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade B: Human trials
