hCG 5000 IU

QUICK GUIDE

LH mimic for testicular function ♥

WHAT IS HCG?

hCG is a hormone that acts like LH, the pituitary signal that tells the testes to make testosterone. It's FDA-approved for male hypogonadism and fertility treatment. It's widely used alongside testosterone therapy to keep the testes working. Its label explicitly says it doesn't help with weight loss.

Strongest evidence: A · Approved use

RECONSTITUTION

Add 2 mL bacteriostatic water to the 5000 IU vial.

This yields 2500 IU/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 2 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

250 IU every other day (Coviello 2005, grade B)

WEEK	DOSE (2–3 times weekly or every other day)	UNITS (U-100 SYRINGE)
Week 1 onward	250 IU	10 units

Set 'Every 2 days'.

POTENTIAL BENEFITS

- **Approved:** Hypogonadism, cryptorchidism, ovulation induction. A · Approved use
- **On TRT:** 250 IU every other day kept intratesticular T normal. B · Human trials
- **Not for weight loss:** The label says hCG doesn't add weight loss. A · Approved use
- **Estrogen:** Gynecomastia and edema are listed reactions. A · Approved use

POTENTIAL SIDE EFFECTS

- Headache, irritability, fatigue
- Edema; gynecomastia
- Injection-site pain
- Women: ovarian hyperstimulation

Unit math: every unit value the catalog prints matches (1,000 IU/mL and 2,500 IU/mL).

The catalog's high-dose protocol overlaps: 'Weeks 1–4' and 'Weeks 4–8' both claim week 4.

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade A: Approved use
