MOTS-c 20mg

QUICK GUIDE

Mitochondrial peptide, mouse data ♥

WHAT IS MOTS-C?

MOTS-c is a short peptide encoded in mitochondrial DNA. In mice it prevented diet-induced obesity and insulin resistance, with exercise-like effects on muscle. MOTS-c itself has no human trials. A modified version, CB4211, showed small liver-enzyme drops in a 4-week trial.

Strongest evidence: D · Animal / lab

RECONSTITUTION

Add 3 mL bacteriostatic water to the 20 mg vial.

This yields 6.7 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 3 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog: 5 mg every 5 days (grade E)

WEEK	DOSE (Every 3–5 days)	UNITS (U-100 SYRINGE)
Weeks 1–10	5 mg	75 units

Set 'Every 5 days'.

Cycle: catalog: 8–10 weeks on, 4–5 weeks off.

POTENTIAL BENEFITS

- **Mouse metabolism:** Prevented diet-induced obesity and insulin resistance. D · Animal / lab
- **Analog CB4211:** ALT −21% vs −4% in 4 weeks (n=20). B · Human trials
- **MOTS-c in humans:** No trials. N/E · Not enough evidence

POTENTIAL SIDE EFFECTS

- No human data
- Injection-site reactions (anecdotal)

Unit math: every unit value the catalog prints matches across all four mixes.

Treating mouse results as human dosing

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade D: Animal / lab

For educational use only.
