SLU-PP-332 10mg

QUICK GUIDE

ERR agonist 'exercise mimetic', mouse data only ♥

WHAT IS SLU-PP-332?

SLU-PP-332 is a synthetic small molecule that activates estrogen-related receptors. These switch on an endurance-exercise-like program in muscle. In obese mice it raised energy expenditure and cut fat mass without changing food intake. It has never been tested in people.

Strongest evidence: D · Animal / lab

RECONSTITUTION

Add 2.5 mL bacteriostatic water to the 10 mg vial.

This yields 4 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 2.5 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog 1.25 → 2.5 mg/day (grade E)

WEEK	DOSE (Once daily, 5–7 days a week)	UNITS (U-100 SYRINGE)
Weeks 1–4	1.25 mg	31.3 units
Weeks 5–8	2.5 mg	62.5 units

Cycle: catalog: 8–16 weeks on, 4–8 weeks off (56–112 / 28–56 days).

POTENTIAL BENEFITS

- **Energy expenditure:** Higher energy use and fat oxidation in obese mice. D · Animal / lab
- **Fat mass:** Less fat accumulation in mice. D · Animal / lab
- **DMSO mix:** The catalog injects it in DMSO; no approved injectable use of DMSO. A · Approved use
- **Human data:** None. N/E · Not enough evidence

POTENTIAL SIDE EFFECTS

- No human data
- DMSO can cause injection-site irritation and a garlic-like odor

The diluent volume includes 0.5 mL DMSO: total 2.5 mL, so 4 mg/mL. The catalog's units match that.

The catalog links a retail (Amazon) DMSO for an injectable mix.

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade D: Animal / lab

For educational use only.
