SS-31 (Elamipretide) 30mg
QUICK GUIDE

First approved mitochondria-targeted drug ♥

WHAT IS IT?

SS-31 (elamipretide) is a four-amino-acid peptide that binds cardiolipin in the inner mitochondrial membrane. The FDA gave it accelerated approval in 2025 as Forzinity, 40 mg daily, for muscle weakness in Barth syndrome, a rare mitochondrial disease. Its wellness use isn't studied.

Strongest evidence: A · Approved use

RECONSTITUTION

Add 2 mL bacteriostatic water to the 30 mg vial.

This yields 15 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 2 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Catalog standard: 5 mg Mon–Fri (grade E)

WEEK	DOSE (Daily or 3–5×/week)	UNITS (U-100 SYRINGE)
Weeks 1–12	5 mg	33.3 units

Cycle: catalog: 8–12 weeks on, 4–8 weeks off.

POTENTIAL BENEFITS

- **Approved 2025:** Forzinity for Barth syndrome (accelerated). A · Approved use
- **Cardiolipin:** Stabilizes the inner mitochondrial membrane. A · Approved use
- **Strength:** Knee-extensor strength gains (TAZPOWER). A · Approved use

POTENTIAL SIDE EFFECTS

- Injection-site reactions (mild–moderate)
- Others not detailed in the summaries reviewed

30 mg vial: 4 mg = 26.7 units; the catalog prints 28 (borderline rounding). Every other value matches.

The approved dose is 40 mg daily; the catalog's standard is 5 mg.

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade A: Approved use

For educational use only.
