Thymosin Alpha-1 10mg
QUICK GUIDE

Thymic peptide approved abroad for hepatitis B ♥

WHAT IS THYMOSIN ALPHA-1?

Thymosin alpha-1 (thymalfasin) is a natural thymus peptide that strengthens T-cell immunity. As Zadaxin it's approved in about 35 countries for chronic hepatitis B, at 1.6 mg twice a week. It isn't approved in the US or EU.

Strongest evidence: A · Approved use

RECONSTITUTION

Add 2 mL bacteriostatic water to the 10 mg vial.

This yields 5 mg/mL.

1. Swab both vial tops with an alcohol pad.
2. Draw 2 mL of water and inject it slowly down the vial wall.
3. Roll gently until dissolved; don't shake.
4. Label and refrigerate.

DOSING PROTOCOL

Label: 1.6 mg Mon/Thu (Zadaxin regimen, grade A)

WEEK	DOSE (Twice weekly)	UNITS (U-100 SYRINGE)
Weeks 1–24	1.6 mg	32 units

POTENTIAL BENEFITS

- **Approved:** Zadaxin in ~35 countries for hepatitis B. A · Approved use
- **Immunity:** T-cell maturation; dendritic-cell activation. A · Approved use
- **Hepatitis B:** Higher sustained response with 6 months of therapy. A · Approved use

POTENTIAL SIDE EFFECTS

- Injection-site discomfort
- Transient ALT rise (hepatitis B patients)
- Generally well tolerated

The catalog's twice-weekly 1.6 mg matches the label regimen.

Autoimmune disease or immunosuppressive therapy (inferred)

For subcutaneous injection

Refrigerate after mixing. Catalog: use within 60 days.

Evidence grade A: Approved use
